

EBCDIC Data Conversion to SQL Tables

Project Overview

- 1 Converted EBCDIC binary data into readable format.
- 2 Loaded transformed data into SQL Server tables.
- 3 Built an ETL-based solution using COBOL and Java.

System Flow Diagram

VSAM / PS Files → EBCDIC Data → COBOL Processing → Java Tool → SQL Server Tables

Roles & Responsibilities

- 1 Developed Java frontend for data migration
- 2 Integrated COBOL backend with Java
- 3 Automated SQL Server data loading
- 4 Transformed VSAM & PS file data
- 5 Used COBOL copybooks for mapping
- 6 Handled multi-file migration
- 7 Optimized performance and resolved issues

Technologies Used

Category	Technologies
Mainframe	VSAM, COBOL
Backend	COBOL
Frontend	Java
Database	SQL Server
